# English Language Arts Test Specifications

## Introduction

The Iowa Statewide Assessment of Student Progress (ISASP) includes individual assessments in English Language Arts (ELA), Mathematics, and Science intended for use within the last 12 weeks of the academic year. These summative assessments measure student achievement, growth and college and career readiness based on the Iowa Core Standards. The ELA assessments of ISASP address Iowa Core Standards in Reading, Language, and Writing.

Constructing meaning from print, or reading comprehension, should be the main focus of reading instruction regardless of grade level. The ISASP Reading tests are designed with this underlying philosophy in mind. The scope and sequence provide a framework for assessing reading skills that align with the Iowa Core Standards. How well students can comprehend a variety of written materials is measured across a broad range of reading purposes and content. The content measured is a developmentally appropriate continuum of reading skills designed to reflect students' learning processes and progressions from grade to grade, as defined by the Iowa Core. At each level, the tests measure how well students construct meaning from reading prompts of various lengths, difficulties, and genres with a focus on key ideas and details, authors' craft and the integration of knowledge and ideas.

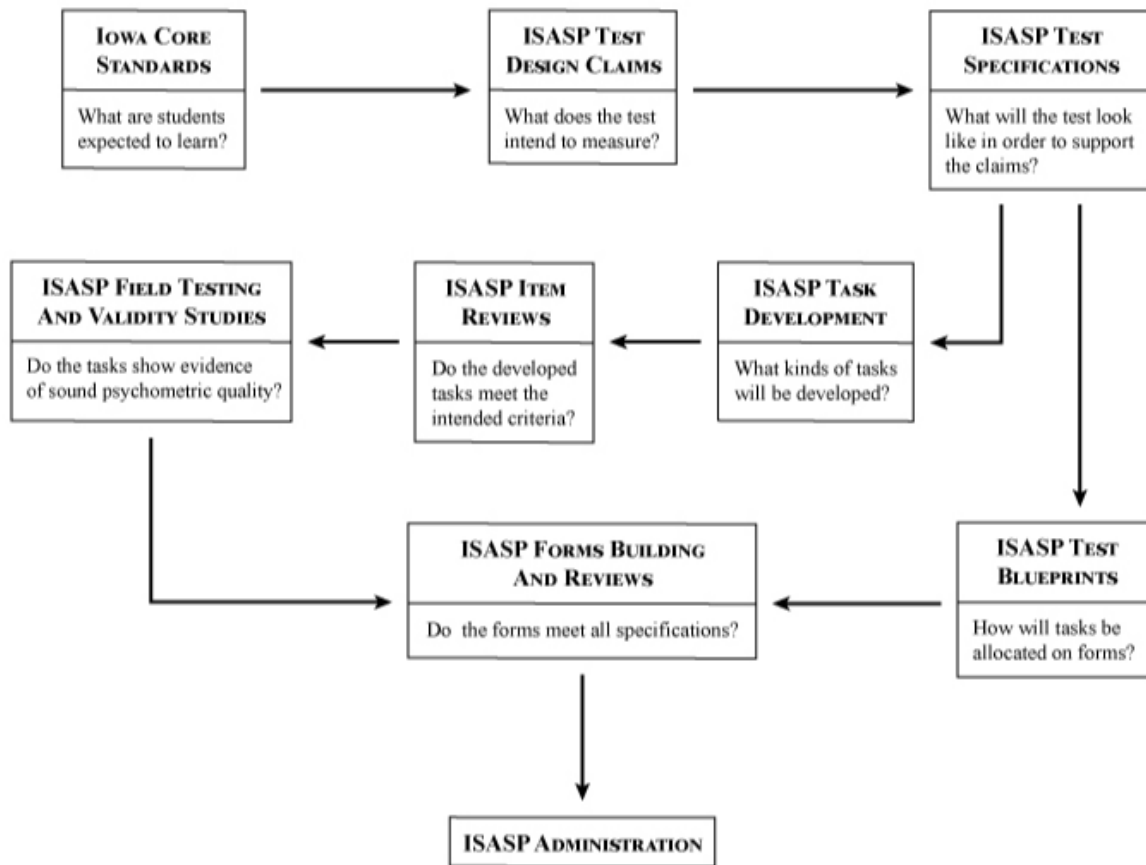

The Language/Writing tests in the ISASP are designed to measure students' proficiency in using the conventions of standard written English and their ability to understand how language is used to express ideas. Students respond to editing tasks as well as producing their own writing samples in an evidence-based direct writing assessment. The language and writing skills measured are aligned with the Iowa Core Standards.

This document presents the ELA test specifications for grades 3-11. Specifically, this document includes: 1) test design claims, 2) test and design specifications, and 3) enhanced blueprints.

## Evidence-Centered Design and the Iowa Statewide Assessment of Student Progress

Evidence-Centered Design (ECD) presents a rigorous framework for building assessments to ensure "that the way in which evidence is gathered and interpreted [during the test development process] is consistent with the underlying knowledge and purposes the assessment is intended to address." (Mislevy, Almond, & Lukas, 2003. p. 2). While ECD in the largest sense encompasses all aspects of the assessment program, it has particular significance for test development. ECD provides test developers with a means for decision making and documenting essential validity evidence around the claims the assessment is intending to measure, the selection and development of the specific tasks that will be given to elicit student responses, and the creation of the test specifications to be followed in forms assembly. Figure 1 provides a conceptual overview of the various stages of an evidence-based process.

Figure 1. An evidence-based approach to building the ISASP

Following ECD principles results in the development of ISASP assessments that can be mapped back directly to claims based on the Iowa Core Standards. As Herman and Linn (2015) noted, “The transparency of the various ECD stages also provides a means for trying to assure that an assessment will represent the depth and breadth of standards and claims it is intended to measure. Each stage influences and constrains subsequent ones...” (p. 6). These stages work together to produce assessments that elicit the intended evidence to support the claims made by the ISASP.

### Test Design Claims

The ELA assessments of ISASP have been designed and developed to support the following claims with respect to student performance.

- Students demonstrate progress toward college and career readiness in English Language Arts in the areas of Reading, Language, and Writing.
- Students demonstrate growth from grade to grade in English Language Arts in the areas of Reading, Language and Writing.

Students will demonstrate their understanding of the Iowa Core Standards in English Language Arts. Content related claims for ELA are given in Tables 1-3.

Table 1. Reading Content Related Claims

<b>Reading</b>	<b>Claims</b>
Key Ideas and Details	Students can determine what the text says and make inferences from it related to central ideas and their development.
Craft and Structure	Students can interpret words/phrases in the text, analyze the structure of texts, and assess point of view or purpose.
Integration of Knowledge and Ideas	Students can integrate and evaluate content from multiple sources and formats, delineate and evaluate specific claims or arguments, including validity and sufficiency of evidence, and analyze or compare how two or more texts build knowledge

Table 2. Writing Content Related Claims

<b>Writing</b>	<b>Claims</b>
Text Types and Purposes	Students can write arguments to support claims, to inform/explain complex ideas and information, or to develop real or imagined experiences or events.
Production and Distribution of Writing	Students can produce coherent writing in which development, organization and style are appropriate to task, purpose, and audience.
Research to Build and Present Knowledge	Students can gather information from print sources to build an argument.
Conventions of Standard English	Students can demonstrate command of the conventions of standard English grammar, usage, capitalization, punctuation and spelling when writing.
Knowledge of Language	Students can demonstrate understanding of how language functions in different contexts and make effective choices for meaning and style.

Table 3. Language Content Related Claims

Language	Claims
Conventions of Standard English	Students can demonstrate command of the conventions of standard English grammar, usage, capitalization, punctuation and spelling when writing.
Knowledge of Language	Students can demonstrate understanding of how language functions in different contexts and make effective choices for meaning and style.
Vocabulary Acquisition and Use	Students can determine the meaning of words and phrases through context clues and analysis or word parts and understand figurative language, word relationships, and nuances of meaning.
Text Types and Purposes	Students can demonstrate understanding of writing that supports claims, informs/explains complex ideas and information, or develops real or imagined experiences or events.

### Test and Design Specifications

ELA test and design specifications provide guidelines for developing sound and aligned assessments to support the claims of the assessment. The summary test specifications presented here reflect the depth and breadth of the performance expectations of the Iowa Core Standards. The ISASP ELA assessments include two tests: Reading, and Language/Writing.

The following sections include critical information about the domains of the Iowa Core to be assessed, the types of items to be used, the cognitive complexity and breadth of the items, and the statistical targets.

### Domains Assessed

Table 4 provides the domains and domain coverage targets in the Iowa Core that are assessed and reported for the English Language Arts tests of the ISASP at Grades 3–11. For each Iowa Core domain, the content-related claim referenced in the previous section is made based on student performance.

### Item Types

Measuring the depth and breadth of the current Iowa Core Standards requires a balanced and layered approach that incorporates a range of tasks and stimulus materials. Selected-response items are excellent for efficiently evaluating student knowledge and understanding of a variety of concepts and content included within the Iowa Core. However, additional assessment formats are needed to measure those skills that are not easily assessed by these more traditional formats. The intent of increasing the types of item formats in the assessments is to expand and improve the measurement of student understanding and proficiency overall.

The ISASP is designed to mirror the rigor of the current Iowa Core by employing a robust suite of traditional and nontraditional item types, including:

- **Short constructed response items:** These items challenge students to draw upon higher-order thinking and cognitive processes and generate their own responses. For example, a short constructed-response Reading item may require the student to write an objective summary of a reading passage. Short constructed-response items are designed to be answered in 5-7 minutes testing time.
- **Extended-constructed response items:** Extended constructed-response items require the student to craft an extended response to a writing prompt. Extended constructed-response items are designed to be answered in 45 minutes testing time.

- **Technology-enhanced items (TEIs):** These online items require students to engage in tasks designed to use complex thought processes. These items take advantage of the latest computer-based technologies. They may include response interfaces such as hot spots, drag-and-drop, point-and-click, cloze, and graphing; or require students to provide or select multiple responses to a single question. All TEIs are machine scored. Some specific examples of technology-enhanced items types are included in Table 5.
- **Selected-response items:** These items are efficient to administer and offer strong technical properties. These items can be written to address varying levels of cognitive complexity to measure students' skills and knowledge at three cognitive levels. All selected-response items on the ELA assessments contain four-options.

Table 5. Examples of TEI types

Item Type	Description
Drop-down Item	This item type allows students to make a selection from a drop-down menu.
Fill-in Item	This item type allows students to type in a text-based response using a keyboard (virtual or physical).
Open-ended Item	This item type allows students to type in a text-based response using a keyboard (virtual or physical).
Order Item	This item type allows students to order options into a sequence.
Hot Spot Item	This item type allows students to select one or more regions on a graphic or image to identify their choice.

For the ISASP Reading Test, the number of items per item type for grades 3-11 are given in Table 6. Table 7 provides the number of items per item type for grades 3-11 for ISASP Writing Test. Lastly, the number of items per item type for grades 3-11 for ISASP Language Test is presented in Table 8.

#### Cognitive Complexity

The depth-of-knowledge (DOK) should be consistent between what is required by the Iowa Core Standards and the items on the ISASP. To ensure this consistency, all items have been reviewed for their cognitive demand to ensure that what students are expected to know and do is consistent between the two and that the item-level DOKs meet or exceed the DOK levels specified for each standard in the Iowa Core. Table 9 describes these levels, and Table 10 summarizes the percentage of items per DOK level. The result is an assessment with a full range of item complexity, where each item in the new assessment has been assigned one of three Cognitive Level descriptors.

Table 9. ISASP Cognitive descriptions

<b>Cognitive Level</b>	<b>Description</b>
Essential Competencies (DOK 1)	This level of difficulty involves recalling information such as facts, definitions, terms, or simple one-step procedures.
Conceptual Understanding (DOK 2)	This level of difficulty requires engaging in some cognitive processing beyond recalling or reproducing a response. A conceptual understanding item requires students to make some decisions as to how to approach the problem or activity and may require them to employ more than a single step.
Extended Reasoning (DOK 3)	This level of difficulty requires problem solving, planning, and/or using evidence. These items require students to develop a strategy to connect and relate ideas in order to solve the problem, and the problem may require that the student use multiple steps and draw upon a variety of skills.

Table 10. Percentage of items per DOK level

### Statistical Specifications

To ensure support for claims that make inferences about student achievement, growth and readiness, both classical and IRT-based statistics are used to assemble test forms. For classical statistics the selection of items will be limited to those that have p-values within an acceptable range (0.20 to 0.90) and discrimination indices greater than 0.20. For IRT estimates, the selection of items will be based on a-parameters that are above 0.4 and b-parameters between -3.0 and 3.0.

### Test Blueprints

The ELA assessments address Iowa Core Standards in Reading and Language/Writing. Table 4 provides a summary of the percentage of items within total test by grade level by domain. More detailed test blueprints are given under Section ELA Enhanced Blueprints – Grade Level Tables for each grade. They include the range of operational items and approximate percentage of the total items on the test per each standard.

The following sections provide general descriptions for each Reading, Language (Written Expression), and Writing tests.

#### Reading

The ISASP Reading tests measure how well students can comprehend a variety of written materials. They contain authentic, engaging reading passages of varying length and complexity. Both literary passages (e.g., fiction, folktales) and informational passages (e.g., expository science and social studies materials, procedural texts, and general nonfiction) are included. A significant number of questions may require students to draw inferences or to generalize about what they have read, and the questions reflect a variety of cognitive levels in the comprehension of texts that students read. The Reading tests provide users with information about the kinds of comprehension skills students are expected to continue developing—skills they will use in reading texts across the curriculum, in engaging with literature, and in reading and thinking about materials encountered outside of school. Questions associated with each passage require students to demonstrate understanding at a variety of cognitive levels associated with reading comprehension.

In spring 2022, the online Reading tests for the ISASP moved to an adaptive test design. This design consists of sets of questions, or stages, that vary in difficulty. Students are presented with new stages based on their performance on previous stages. Adaptive testing allows for greater measurement precision of the student’s proficiency, while remaining aligned to the Iowa Core standards.

### Language

The ISASP Language tests focus on students’ abilities to understand how language is used to express ideas. Students must choose the best or most appropriate way to express the ideas in a piece of writing. Choices involve organization, sentence structure, usage, clarity, and the most effective or appropriate language for a particular audience. All questions are based on complete texts (ranging from 180 to 400 words) patterned after student writing in content and style. These texts are drawn from many different types of writing familiar to students, including argument, informative/explanatory, and narrative examples. Each is presented as a draft in which certain portions have been marked to indicate a possible need for revision.

### Writing

The third section of the ELA assessment is the writing test, which includes a writing prompt tied to a pair of texts (in addition to standard texts, students may also gather information from graphs, charts, or other formats). In responding to the writing prompt, students must take a position based on what they have read, then cite evidence from the texts to support their claim. Prompts that require different types of writing are developed each year to allow for a comprehensive coverage of the Iowa Core in writing. As outlined on the expanded Language/Writing blueprint document, student scores on multiple traits allow for the writing test to contribute directly to coverage of multiple Iowa Core domains.

Analytic scoring provides detailed assessment of skill level in four different areas of writing skill: Prompt Task, Development of Ideas, Organization, and Language Use. The responses are amenable to scoring by both human readers and automated, artificial intelligence (AI)-based protocols.

**Note on Text Complexity** – For each passage appearing in the ISASP ELA tests, the level of text complexity was evaluated during the development process through quantitative and qualitative measures. Quantitative measures are aspects of text complexity that are unlikely to be evaluated by a subject matter expert reliably, and therefore computer software is used. The quantitative measures relevant to passage development for the ISASP are Flesch-Kincaid and Lexile® scores. Considerations of text complexity relative to grade follow the guidelines for Flesch-Kincaid and Lexile® grade band ranges found in Figure 1 of the *Common Core State Standards Supplemental Information for Appendix A* (2012). Qualitative measures are best determined by subject matter experts who can evaluate the purpose, organization, language appropriateness, and the likely understanding of the target reader, among other considerations. The qualitative measures relevant to passage development are documented in a passage review checklist and evaluated by a minimum of two independent subject matter experts during the development process. Finally, an overall determination of specific grade appropriateness is determined using both quantitative and qualitative scores.

Table 11 provides the text complexity ranges for the ISASP Reading and Writing texts.

<b>Test Complexity Range</b>	<b>Grade 3</b>	<b>Grade 4 - 5</b>	<b>Grade 6 - 8</b>	<b>Grades 9-10</b>	<b>Grade 11</b>

### Alignment Evidence

Alignment to the Iowa Core Standards has been a guiding principle of the development of the ISASP. Since the Iowa Core Standards were adopted by the state in July 2010, these standards have defined and shaped the development and research necessary to build assessments aligned to the Iowa Core in English Language Arts.

To produce items that are aligned, Iowa Testing Programs follows a well-defined development process that helps to ensure the appropriate balance and representation of content. This process includes the following steps:

- Creation of test claims for the assessment that tie directly to the Iowa Core Standards in Science
- Creation of test specifications that define the domains, standards and cognitive processes to be measured
- Development of test materials by Iowa educators and content experts that are aligned to the Iowa Core Standards
- Verification of these alignments by focus groups of Iowa educators who are actively teaching English Language Arts, Mathematics, and Science at the appropriate grade levels
- Continued evaluation of the items throughout field testing to confirm the items measure the standards as originally intended

Calling on the expertise of Iowa educators from the very beginning of the development process, including the initial conceptualization of the materials, is a defining feature of the ability to demonstrate alignment to the Iowa Core Standards.

### Forms Construction

Forms construction for ISASP assessments in all subject areas begins by selecting the operational items for an administration. Using the items available in the item pool, content specialists and measurement experts from Iowa Testing Programs (ITP) assemble new forms by selecting items that meet the Enhanced Blueprints and targeted statistical specifications described previously in this document. The test assembly process is an iterative one, involving ITP development and measurement experts and teams of Iowa teachers with classroom experience who participate in item and test review panels.

Measurement and content experts review the newly assembled tests to ensure specifications

**and difficulty levels have been maintained. Although every item on the test has been previously scrutinized by Iowa educators and curriculum experts for alignment to Iowa Core, these attributes are reexamined for each item selected for the assembled test. Items are also further examined for their statistical quality, range of difficulties, and information and contributions given the selection of other items for the test.**

**Measurement and content experts also review each assembled form to ensure a wide variety of content is represented in the test items, to verify that the test measures a broad sampling of student skills within the content standards, and to eliminate “cueing” of an answer based on the content of another item appearing in the test. Additional reviews are designed to verify that keyed answer choices are the only correct answer to an item and that the order of answer choices on the test form varies appropriately. If any of these procedures uncovers an unsatisfactory item, the item is replaced with an item from the item bank and the review process begins again. This process for reviewing each newly constructed test forms helps to ensure each test will be of the highest possible quality.**

**The match between the targeted number of items per domain and the number of items found on the ISASP forms in 2019, 2021 and 2022 is provided in the Appendix (Tables 12 to 20). These tables provide evidence that any areas in need of improvement identified in the 2018 HumRRO ISASP Alignment Report (Dickinson, Michaels, & Thacker, 2018) have been incorporated into subsequent forms. Specifically, these areas include 1) the Reading domain Key Ideas and Details in grade 6 (Table 15), grade 10 (Table 19) and grade 11 (Table 20), 2) the Reading domain Craft and Structure in grade 11 (Table 20), and 3) the Writing domain Research to Build and Present Knowledge in grade 7 (Table 16).**
